

Fisheries Notification

National Grid, Deepwater Wind and its Contractors LS Cable and Kokosing-Durocher Marine Division are planning to conduct supplemental marine surveys along select locations of the **Block Island Transmission System and the Block Island Wind Farm** submarine cable routes.

- Utilize the F/V Heather Lynn docked out of Galilee, RI
- Conduct supplemental geotechnical investigations to confirm ocean bottom conditions along approved cable routes
- Vessel to be equipped with jet probe to target approximately 19 verification points
- Additional test probes may be advanced depending on subsurface conditions encountered
- Investigations to avoid and not dislodge fishing gear/tackle
- USCG Local Notice of Mariners to be provided
- Estimated start date of June 8, 2015
- 7-14 days at sea to complete marine surveys
